

SECURELOGIC SUBSIDIARY AWARDED \$600,000 MILITARY INSTALLATION

NEW YORK, NEW YORK – November 16th, 2005 -- SpaceLogic Ltd., the wholly owned subsidiary of SecureLogic Corp. (OTCBB: SLGI), a provider of enterprise software solutions, has been awarded a \$600,000 contract to supply Automated Warehousing Systems for a military application in a country in the Mediterranean region.

Included in the scope of work are 9 vertical lift modules managed by SpaceLogic's advanced software, FlowX.

SpaceLogic's warehouse management systems utilize its proprietary software FlowX to increase storage density, throughput, and material handling efficiency while reducing inventory losses and labor costs. They efficiently deliver product to the operator, yielding a low-floor-space way of storing, securing, and retrieving anything from small parts to fixtures and tools.

CEO, Gary Koren stated, "The SpaceLogic automated warehouse system enables high-density space utilization and an ergonomic design that reduces the walking and search time associated with conventional storage methods. Our solution will help ensure optimum performance and productivity required for tight run military operations."

Handover of the project is expected within 7 months.

About SecureLogic

SecureLogic develops and markets software products for the command, control and monitoring of complex security screening operations. SecureLogic's systems utilize proprietary methodologies to manage and direct passenger, baggage and cargo security screening systems. The company's solutions are integrated with screening equipment, passenger handling, baggage handling and other material handling systems, and information systems at various terminals. SecureLogic's comprehensive baggage screening and passenger screening solutions are designed for airports, seaports, border-crossings and other complex transfer points.

SpaceLogic Ltd., a wholly owned subsidiary of SecureLogic, is a hi-tech engineering company, experienced in developing and implementing automated baggage-handling systems as well as automated and computerized material-handling systems.
